EXPERIENCE

Lead Data Engineer

Xepelin

03/2023 - Present Remote

Led a team of technical experts and orchestrated the development of both our team's roadmap and the company's data architecture. I addressed cross-team challenges by translating them into self-service solutions, fostering operational efficiency. Additionally, I championed individual career progression by implementing tailored development plans for team members. My role was instrumental in aligning technical strategies with business objectives, driving innovation, and fostering a culture of continuous growth within the organization.

Head of data

Belo

01/2022 - 03/2023 Remote

Responsible for creating the area from the ground up. Evaluating and deciding on the appropriate solutions for data warehousing (BigQuery), visualization (Superset), and ETL (in-house solution). In charge of a small team and responsible for orchestrating the backlog along with weekly meetings and career plans.

Senior Data Scientist

NextRoll Inc.

01/2021 - 01/2022 Remote

Maintain different services on AWS like Airflow, MIFLow, and other in-house developments as well as proactively developing generic ML pipelines for the targeting team are among my main responsibilities.

Code reviewing and assessment of technologies for the stack were daily tasks given that the team was considerably new and growing.

Senior Data Engineer

MercadoLibre SRL

2018 - 12/2020 Buenos Aires, Argentina

On a daily basis, I was in charge of the administration and maintenance of the entire AWS account for BI at MercadoLibre. This implies making sure to have automated backups and integrity on the different services. For example, creating Lambdas for automated creation and deletion of AMLs. I was also responsible for deploying infrastructure and configuration for a range of tools that BI offers internally as a service like Tableau, Redshift, Elasticsearch, Microstrategy, and Alation.

ACHIEVEMENTS

Make it real

Deployed a OpenDistro (Elastic) Cluster using Docker Compose in less than a week to provide real time visibility during an economic crisis in Argentina.

From scratch

Selected and implemented an appropriate set of tools in order to develop the entire data team for a small startup.

We are a team

Engineered and develop the backend for the main ETL tool inside the company. Avoiding code duplication and reducing development times drastically.
